

General Education

Philosophy and Purposes of General Education

The General Education program is designed to complement the specialized programs to produce full-fledged engineers by providing them with general knowledge essential for citizens and also a strong foundation on which they can continue accumulating knowledge in their specialized fields.

Courses in the Humanities introduce students to the world's cultural traditions, historical events and social practices, fostering their verbal communication skills and a spirit of international cooperation.

Courses in the Sciences encourage students to think scientifically and explore the universe with their expert knowledge of engineering. Health and physical education leads students toward a healthy life.

Because General Education is the program common to all departments, it contributes to our curriculum integrity.
